

TIMEPIECE WITH INTEGRAL MOLDED WRISTBAND**ABSTRACT OF THE DISCLOSURE**

A bracelet-style watch having a case, a wristband formed integral with the case, and three separating element is disclosed. The separating elements, located on the case and wristband, form a space between the timepiece and the wrist. The space permits air to freely enter a substantial portion of an area between the timepiece and the wrist, thereby ventilating and reducing the quantity of perspiration that collects between the timepiece and the wrist.
